

LEADERSHIP FOR LIFE

Leadership for Life is a philosophy of living that empowers individuals and organizations to achieve their vision, goals and dreams.

Fred Sarkari: Believes that people are the company's greatest asset.

Leadership for Life workshops and seminars give your organization the opportunity to expose your team to a wealth of practical knowledge and hands-on activities through personal and case study analyses.

We are passionate about our *Leadership for Life* programs because we have seen them work time and time again!

OUR PHILOSOPHY

Our focus is the development of the individual. We believe that people are the foundation of any organization, with each person impacting the dynamic of the whole body. The success of your organization is the by-product of individual successes.

Our services begin with a systematic process through which we identify your individual and/or organizational requirements. We then develop a customized solution to meet your objectives.

We do not offer template courses for the main reason that every individual and organization has very specific, unique needs. Most successes in life can be attributed to adherence to a proven system. Fred Sarkari: *Leadership for Life* follows a proven systematic process in order to develop the program most suitable for the individual or organization.

We demonstrate to individuals the reasons why their role in the organization is important, and how they contribute to the company's success. Employees will recognize that they are not just performing a "job description", but are contributing to the organization's welfare. We also help to identify leadership styles and promote the most effective, beneficial leadership approach at all levels.

In order to facilitate positive change, growth, and performance, an individual must realize the situation he or she is in and the impetus that put him or her there. This will prompt awareness of what is needed to reach the next level.

Our philosophy is based on embracing leadership right from the conception of an idea, through to the completion of any goal ...not just in the business world, but also in everyday life.

Productive, sustainable organizations result from sound design principles -- design principles that recognize the organization as an interdependent network of living, dynamic human beings.
